EXPERIENCE

Senior iOS Developer
Feb 2023 – Present

Eulerity, NY, USA

- Provide technical leadership for the iOS engineering team, guiding feature delivery, code quality, and architectural decisions across the platform
- Directed a multi-phase app transformation across iOS, Android, and backend, designing the supporting APIs behind four major features (activity delta banner, live pulse indicators, guided app tour, and pull-to-refresh with freshness timestamps), all shipped behind feature flags with full platform parity
- Spearheaded the team's migration to SwiftUI from the ground up, bringing the codebase to roughly 70% SwiftUI adoption to date; the shift lowered the barrier to entry enough that Android engineers began contributing directly to iOS features, expanding the team's effective delivery capacity
- Built and maintain a suite of Claude Code agent skills, including automated experiment removal with build verification, an independent code-review subagent, a standardized PR drafter, and an iOS onboarding guide, adopted by the entire mobile team, with select skills rolled out company-wide across engineering
- Engineered an AI-assisted PR review pipeline integrating Jira and Figma via MCP servers, cutting average review cycle time from roughly a week to under a day
- Designed and built an end-to-end hackathon evaluation pipeline on Claude Cowork that ingests submissions from Gmail, scores and stores each entry, and generates a consolidated results report — enabling the team to review hundreds of submissions in a single day versus several weeks of manual review previously
- Implemented a real-time data sync system using Swift Concurrency and Combine, improving app responsiveness by 30% and reducing data-related issues by 20%
- Raised team productivity by 20% by introducing the MVVM architectural pattern across the codebase
- Migrated the project from CocoaPods to Swift Package Manager, cutting build times by 25%
- Authored the team's iOS code review standard, a severity-tiered guide covering concurrency, SwiftUI state, memory management, and testing and enforcing it through reviews and automated tooling
- Own the App Store release cycle end-to-end via App Store Connect, ensuring timely, reliable updates for all users
- Contribute to platform architectural decisions and evaluate emerging iOS technologies to keep the codebase scalable and maintainable
- Partner with the recruitment team to source and technically evaluate candidates for mobile engineering roles
- Deliver cross-platform Android features using Kotlin, XML, and Jetpack Compose, applying iOS architectural expertise across both platforms
- Automated XCTest unit test execution with Jenkins, reducing manual testing effort and strengthening release quality gates

iOS Developer Intern
May 2022 – Dec 2022

Eulerity, NY, USA

- Researched and integrated the KIF UI/unit testing framework, enabling combined UI and unit testing and improving testing efficiency by 50%
- Identified and resolved a critical memory leak, eliminating crashes on older devices and improving app performance by 15%
- Optimized app performance and implemented measures to improve stability and scalability
- Authored internal documentation to support team understanding of newly implemented features
- Triaged and resolved bugs across the app, maintaining a smooth and reliable user experience

Software Engineer
Dec 2019 – Aug 2021

Schnell Technologies, India

- Built websites, web apps, and mobile applications as part of a cross-functional engineering team
- Introduced a new cloud database system that cut data-analysis testing time by 60% and strengthened data security

iOS Developer Intern
May 2019 – Jul 2019

Seva Tech, India

- Led a team of 6 developers to design and build the Rojgaar iOS application
- Developed Rojgaar in Swift with Firebase integration for real-time cloud connectivity

PROJECTS

ChoreQuest: Family Adventures — iOS App

- Designed, built, and launched a native iPhone and iPad app on the App Store using SwiftUI and Firebase, turning family routines into quests, parent-approved XP, and meaningful rewards.
- Implemented recurring chores, checklists, photo-proof submissions, parent reviews, personal rewards, shared family goals, and progress insights, with separate parent and child experiences.
- Integrated authentication, family invitations and device pairing, Home Screen widgets, and auto-renewable Premium subscriptions.

RestSync — macOS App

- Built a native macOS menu-bar app inspired by the 20-20-20 rule to prompt regular screen breaks and reduce eye strain
- Designed and developed end-to-end in SwiftUI, following macOS Human Interface Guidelines with a focus on minimal footprint, accessibility, and unobtrusive UX
- In daily personal use today, with a public App Store release planned; source available on GitHub

EDUCATION

Master of Science, Artificial Intelligence **Jan 2026 – Present**
New England College, NH, USA

Master of Science, Computer Science **Aug 2021 – May 2023**
Stevens Institute of Technology, NJ, USA

SKILLS

Programming Languages: Swift, Objective-C, Kotlin, Python, Java, C, C++, JavaScript, SQL

Apple Platforms: iOS, iPadOS, macOS, watchOS

Frameworks: Swift Concurrency, Combine, SwiftUI, UIKit, Core Data, HealthKit, XCTest, Swift Testing, KIF, EarlGrey, Swinject, XcodeKit

Tools: Xcode, App Store Connect, TestFlight, Swift Package Manager, CocoaPods, Android Studio, Figma

AI Tools: Xcode Agentic AI, Claude Code, Claude Agent Skills, Claude Cowork, MCP, ChatGPT Codex, GitHub Copilot, RAG Systems

Other Technologies: Firebase, Crashlytics, OpenAI API, Docker, MongoDB, React, AWS, GitHub, Jenkins
