EXPERIENCE

Senior iOS Developer

Feb 2023 – Present

Eulerity, NY, USA

- Lead the iOS development team, overseeing feature implementation and ensuring code quality across the platform
- Led end-to-end delivery of a multi-phase app transformation initiative across iOS, Android, and backend, designing the supporting APIs and shipping a “since your last visit” delta banner, pulse indicators, a guided app tour, and pull-to-refresh with freshness timestamps, all behind feature flags with full platform parity
- Led the full transition to SwiftUI, establishing it as the team’s standard and positioning the team to move faster on every subsequent feature
- Built and maintained a suite of Claude Code agent skills adopted by the mobile team, including automated experiment removal with build verification and an independent review subagent, a standardized PR drafter, and an iOS onboarding skill that ramps new engineers on the codebase
- Engineered AI-assisted development infrastructure across the team’s workflow: phase-aware PR review automation integrating Jira and Figma via MCP servers, Xcode agentic AI configuration, and Claude Code, Codex, and Copilot in daily coding, refactoring, and review
- Built an end-to-end hackathon evaluation pipeline using Claude Cowork, automatically ingesting submissions from Gmail, storing and grading each entry, and generating a consolidated results report
- Implemented a real-time data sync system using Swift Concurrency and Combine, improving app responsiveness by 30% and reducing data-related issues by 20%
- Improved team productivity by 20% through implementation of MVVM architectural pattern
- Replaced CocoaPods with Swift Package Manager, resulting in 25% faster build times
- Authored the team’s iOS code review standard, a severity-tiered guide covering concurrency, SwiftUI state, memory management, and testing, and enforce it through reviews and automated tooling
- Manage the full App Store release cycle via App Store Connect, ensuring timely and smooth updates to all users
- Contribute to app architectural decisions ensuring scalable, maintainable solutions; monitor iOS platform changes and evaluate new technologies
- Partner with the recruitment team to identify and evaluate potential candidates for mobile developer roles
- Leverage cross-platform expertise by delivering Android features using Kotlin, XML, and Jetpack Compose

iOS Developer Intern

May 2022 – Dec 2022

Eulerity, NY, USA

- Researched and integrated KIF UI/Unit testing framework, enabling combined UI and unit testing, resulting in 50% efficiency improvement
- Identified and resolved a critical memory leak bug, fixing app crashes on older devices and improving app performance by 15%
- Optimized app performance and implemented measures to improve stability and scalability
- Created documentation to further understanding of features implemented
- Troubleshoot and efficiently resolved bugs, ensuring a smooth and reliable user experience

Software Engineer

Dec 2019 – Aug 2021

Schnell Technologies, India

- Created multiple websites, web apps, and mobile applications with a cross-functional team
- Introduced a new cloud database system that reduced testing time on data analysis by 60% and enhanced data security

iOS Developer Intern

May 2019 – Jul 2019

Seva Tech, India

- Led a team of 6 developers to devise and design the Rojgaar iOS application
- Developed Rojgaar using Swift with Firebase integration for real-time cloud connectivity

PROJECTS

RestSync - macOS App

- Built a native macOS menubar app inspired by the 20-20-20 rule recommended by eye specialists, prompting users to take regular screen breaks to reduce eye strain
- Designed and developed end-to-end using SwiftUI, following macOS Human Interface Guidelines with a focus on minimal footprint, accessibility, and unobtrusive UX
- Currently in personal daily use with plans for public App Store release; repository available on GitHub portfolio

CompanionKit - Xcode Extension

- Built an Xcode Source Editor Extension integrating the OpenAI API to refactor code, find bugs, and explain selected code sections, an AI pair programmer living inside Xcode
- Leveraged Swift and Apple's XcodeKit framework to deliver a developer productivity tool with zero context switching required
- Repository available on GitHub portfolio

EDUCATION

Master of Science, Artificial Intelligence

New England College, NH, USA

Jan 2026 – Present

Master of Science, Computer Science

Stevens Institute of Technology, NJ, USA

Aug 2021 – May 2023

SKILLS

Programming Languages: Swift, Objective-C, Kotlin, Python, Java, C, C++, JavaScript, SQL

Apple Platforms: iOS, iPadOS, macOS, watchOS

Frameworks: Swift Concurrency, Combine, SwiftUI, UIKit, Core Data, HealthKit, XCTest, Swift Testing, KIF, EarlGrey, Swinject, XcodeKit

Tools: Xcode, App Store Connect, TestFlight, Swift Package Manager, CocoaPods, Android Studio, Figma

AI Tools: Xcode Agentic AI, Claude Code, Claude Agent Skills, Claude Cowork, MCP, ChatGPT Codex, GitHub Copilot, RAG Systems

Other Technologies: Firebase, Crashlytics, OpenAI API, Docker, MongoDB, React, AWS, GitHub, CI/CD
